

Local Knowledge: District level and above indicators

The Local Knowledge database comprises a range of carefully selected indicators that can be used to profile regional, sub-regional and local performance – economically, socially and environmentally. These are drawn from a number of official and unique Local Futures national data sets, ensuring local area profiles and benchmarking can be set within a national context.

The data sets include a number of key 'Performance Indicators', including Audit Commission Quality of Life and Economic Regeneration PIs. They also include a range of unique Local Futures indicators. These relate especially to important areas of policy where little published data exists – especially in relation to knowledge economy and quality of life indicators. In addition we have developed a range of unique 'composite' indicators that combine individual measures to produce an overall score e.g. enterprise index. These composite scores are used to summarise key elements of performance within a local area profile.

The indicators are arranged in four main categories and fifteen sub-categories.

Economy: economic performance (scale, productivity, growth); industrial structure; businesses and enterprise; skills & qualifications; labour market

Society: demographics (age; ethnicity; occupations; household formation; migration and change) prosperity & wealth; deprivation & inequality; health; crime

Environment: land and property; housing; transport & connectivity; services & amenities; natural environment

Typologies: Based on the Census-derived Output Area Classification

A full list of the indicators available at a Local Authority District level and above is attached. Most of these are also available at a sub-regional and regional level, with a more limited data set available at a Ward level.
